

## Special promotion for Backup Appliances 5150

**Veritas Flex 5150, an all-in-one backup appliance for small infrastructures, allows you to back up remote sites or sensitive company departments.**

With this appliance, companies can effectively manage the resilience of their backup in the event of a Ransomware attack in the datacenter or at remote sites.

- **All-in-one backup and recovery** for organisations with small, enterprise-wide workloads with our easy-to-deploy and easy-to-manage, small (1U), all-in-one solution.
- **Simplicity of proposition** – one supplier for all components and support: hardware, operating system, security and backup software
  - Improvement of the TCO by 40 to 70%.
  - Usable capacity limits of up to 90%.
  - Saves up to 200% floor space
  - Optimised outsourcing to the cloud
  - Energy consumption reduced by up to 15%.
- **Protection with NetBackup:** up to 180% faster backups.
- **A solution against Ransomware with legal protection and security.** In addition, aging and unsupported hardware adds unnecessary risk to your business. Protect all your data with the latest and most secure software and operating environment.
